

Visual Block Coding

Independent study sheet • Not official DPS Agra material • No personal information required

1. Event-driven thinking

```
when green flag clicked
  set [score] to (0)
  repeat (5)
    change [score] by (1)
```

A script starts on an event. Sequential blocks run from top to bottom.

2. Conditions

```
if <touching (edge)> then
  turn clockwise (90) degrees
end
```

Conditions check what is happening and choose a path.

3. Debug by tracing

```
when [space] key pressed
  change [score] by (10)
  say (score)
```

Try one sprite and one event at a time. Explain the program in words.

TRY IT YOURSELF

1. Build a five-step counter.
2. Create a score controlled by the space key.
3. Use an if block to change direction at the edge.

Open the portal Practice IDE for Python, SQL, Web and Block coding.

For other languages, use an approved isolated compiler. Verify unfamiliar code before running.
