

C++ Essentials

Independent study sheet • Not official DPS Agra material • No personal information required

1. Modern basics

```
#include <iostream>

int main() {
    std::cout << "Hello C++\n";
}
```

Use the standard library and meaningful types.

2. Vectors and iteration

```
#include <vector>

std::vector<int> marks {80, 90, 70};
for (int mark : marks) {
    std::cout << mark << "\n";
}
```

Prefer `std::vector` and `std::string` to raw memory manipulation for beginner projects.

3. Functions

```
int doubleValue(int n) { return n * 2; }
```

A short, pure function is easy to test.

TRY IT YOURSELF

1. Find the sum of a vector.
2. Write a reusable maximum function.
3. Explain the difference between C and C++ strings.

Open the portal Practice IDE for Python, SQL, Web and Block coding.

For other languages, use an approved isolated compiler. Verify unfamiliar code before running.
