

Java Essentials

Independent study sheet • Not official DPS Agra material • No personal information required

1. Entry point

```
public class Main {  
    public static void main(String[] args) {  
        System.out.println("Hello Java");  
    }  
}
```

Class names and capitalization matter. Save a public class in a matching file.

2. Types

```
int score = 87;  
boolean passed = score >= 50;  
String topic = "Loops";
```

Java is statically typed. Strings are objects; primitives include int and boolean.

3. Repetition

```
for (int i = 0; i < 5; i++) {  
    System.out.println(i);  
}
```

The condition is checked before each loop iteration.

TRY IT YOURSELF

1. Predict the output of the loop.
2. Write if/else for a passing threshold.
3. Implement a method `int square(int n)`.

Open the portal Practice IDE for Python, SQL, Web and Block coding.

For other languages, use an approved isolated compiler. Verify unfamiliar code before running.
