

HTML, CSS & JavaScript

Independent study sheet • Not official DPS Agra material • No personal information required

1. Semantic HTML

```
<main>
  <h1>My first web page</h1>
  <button id="go">Go</button>
</main>
```

Structure content with semantic elements. Buttons must be keyboard-usable.

2. CSS layout

```
main { max-width: 800px; margin: auto; }
button { padding: 12px; background: teal; }
button:focus-visible { outline: 3px solid orange; }
```

Use relative sizing and visible keyboard focus for accessibility.

3. JavaScript events

```
const button = document.querySelector("#go");
button.addEventListener("click", () => {
  alert("Hello, world!");
});
```

Never place secret keys in client-side HTML, CSS or JavaScript.

TRY IT YOURSELF

1. Add a paragraph and link.
2. Create a responsive two-column CSS layout.
3. Update a heading on button click.

Open the portal Practice IDE for Python, SQL, Web and Block coding.

For other languages, use an approved isolated compiler. Verify unfamiliar code before running.
